SITE PHOTOGRAPHS

Site Work:

View of lift progress along S4 gridline at 11:00

Left: View of slab on grade poured and rebar installation at the Yoda Tunnel Vestibule. Right: View of left: View of Auditorium Roof installation progress. Right: View of slip form wall progress at segment T4 column for verification. (10/27)

Left & Right: View of Deep Space progress from Epicenter Level 2, looking North.

Note: Roof is being installed.

Hyperlapse Video of roof lift:

- Structural Consultant: Thornton Tomasetti

Epic Campus

October 2012

Seats: 11,300

Soil Nail Wall: 71,676 sq ft with 2,844 nails (50-56 feet long)

Deep Space contained a unique set of structural challenges. After excavating over 364,747 cubic feet of rock to allow for the building to extend 74 feet underground, a soil nail wall was built to hold back the soil. The soil nail wall was required to allow the building to be excavated down to the rock foundation without losing stability.
